Phone: +423 237 03 43, Fax: +423 237 03 40, e-mail: information@intaminworldwide.com, www.intaminworldwide.com

The design intention is for a smooth but exciting ride with subtle changes of directions and with a number of close to ground passages to create a sense of speed. Special care has been taken the ride being suitable for a wide range of attendants due to its smooth transitions between different ride elements. The layout can include all the usual combination of figures and elements, such as traditional loops, spiral heart-roll, a high-G 360° horizontal carousel, etc.

The main feature of this Roller Coaster is the Suspended train. The lift structure with the train suspended thereto will be visible from many places inside the park area acting as a magnet seducing guests to give it a "GO". The riders will experience a flying and freedom sensation with their feet dangling and without being able to guess what figure is coming next, since the track is above them.
